EDUCATION

University of Florida

Bachelor of Science (B.S), Computer Science

- **GPA: 3.99/4.0; Cum Laude**

Aug. 2021 – May. 2024

Gainesville, FL

WORK EXPERIENCE

Altair Innovations

Entry Level Software Developer

Jun. 2024 – Dec. 2024

Lake Mary, FL

- Designed a comprehensive strategy and developed roadmap for integrating augmented reality into spine surgery, enhancing precision and visibility in clinical settings.
- Collaborated in creating prototypes and designing a framework to collect imaging data that can be used to customize an existing image recognition AI algorithm.

Captured Sun

Software Engineer Intern

Aug. 2023 – May. 2024

Remote

- Worked on the development of Parchment, an application designed to combine the user's file system and browser to create a customizable digital workspace.
- Refined UI using JavaScript and CSS for improved navigation and user experience (UX).
- Integrated Google Drive functionality using Google API for seamless access and management of local & cloud files from within Parchment.

Altair Innovations

Product Development Intern – Augmented Reality

May. 2022 – Aug. 2022 & Jun. 2021 – Aug. 2021

Lake Mary, FL

- Helped create an augmented reality solution to improve surgical outcomes for orthopedic surgery, spine surgery, and anesthesiology.
- Helped design hardware and refine software user interface (UI) to create a simple, intuitive, and robust screen-mirroring on a mobile augmented reality display for surgeons in the operating room.

PROJECTS

Food Allergen Identifier

- Collaboratively developed a web application enabling users to search for food items and view ingredients along with customized allergen information.
- Designed and implemented a profile page for users to save allergens, favorite foods, and create grocery lists.
- Built a secure sign-up process with email verification to ensure proper user authentication and prevent unauthorized access.
- Utilized TypeScript, HTML, and CSS with Angular framework for the front end, while connecting with a backend API to fetch food data.

Movie Finder

- Led a team to develop a movie recommendation system that processed movie ratings from a CSV file to offer personalized suggestions.
- Implemented a user-friendly menu-based interface where users could select from various options for movie recommendations, including suggestions based on a specific movie, genre, or similar user reviews.
- Used C++ for program development and data parsing, efficiently handling large datasets of movie ratings.

SKILLS & INTERESTS

- **Technologies:** JavaScript, C++, Python, Java, HTML/CSS, SQL, Angular, React, Git, VS Code, APIs, OOP
- **Soft Skills:** Problem-solving; Time Management; Adaptability; Teamwork; Communication; Web Development
- **Interests:** Reading; Hiking; Music; Traveling; Baking; Coffee
